

GoldSMS Config

GoldSMS Configuration (v. 1.10.037)

GoldSMS

☒ Log outbound text to History tab ☐ Include receipt code in history

☐ Include preface:

☐ Include signature:

☒ Include "Additional" PHONE numbers as options

☒ Include "Additional" MOBILE/FAX numbers as options

Cell Carriers:

To auto-locate cell #'s in phone1, phone2, phone3, and fax when these names are found in ext1 through ext4.

FIELD	(Label)
UPHONECCELL	(Cell)

Cell Phone Field(s):

Field(s) entered here will be listed as "send to" options.

Rep Name = (248)555-1234

☐ Include Reps:

Rep names/numbers can be made available when sending if listed here.

Rep description:

Prob. Report Phone #:

ID Code:

The options here are fairly well understood. Of critical importance are the two fields whose labels are in red, namely the problem report phone number (normally your organization's main phone number) and your ID Code.

The problem report phone number is the number your recipients will be instructed to call should they have any questions, or wish to complain, or ask that they not receive further texts.

As for the ID Code, well, *nothing* will happen without it!

Tip: On rare occasion when one user's configuration must be different from another's just install GoldSMS on the outlier's local hard drive, and configure accordingly.
